
Product Release Notes – October 2017

A hotfix was released on October 10th with the following improvements:

Reward Stock

Removed Gift Stock

The stock functionality related to gifts and punch cards was removed. This simplifies the process of sending gifts and punch cards to members—no need to increase stock, no stock alerts, and no more issues with running out of stock.

Limit for Lottery Rewards

A limit capability was added to lottery rewards—allowing a business to set a maximum number of a specific reward type that can be given out. For example, they can create a lottery where up to 5 TVs can be won by their customers.

Improved Bulk Performance

New Queues

The new queues mechanism, which improves performance of bulk actions performed from Filter Members, is now implemented for all businesses.
